

Job description

Position:	Data Modelling Lead	Supervisor:	Government Partnership Programme Lead
Location:	Hybrid working in London, Bristol or Totnes office 2-3 days per week. Flexibility considered.		
Contract:	Full-time, permanent. Open to flexible working options.	Salary:	Ca £50-60k pa depending on experience

Outline:

We are looking for a data modelling lead, to deliver evidence-based analysis in support of positive environmental policy change.

We provide governments with tools and technical expertise to measure, analyse and reduce their plastic footprint. Recommendations enable governments to design and deliver policy solutions that tackle the source of the plastics problem. This work is enabled by Plastic Drawdown, an Excel-based material flow model we developed in consultation with 24 governments around the world. endorsed by the United Nations.

Drawing from a specialism in material flows (in this case being applied specifically to plastic waste streams) you are familiar with technically using, interpreting, developing and enhancing existing models. As an innovative and critical thinker, you will propose and implement solutions. In undertaking subsequent analysis, you are adept at using Excel and related tools to develop numerical models and at finding your way around complex Excel formulas to troubleshoot any anomalies you may identify.

Professional experience is required in the circular economy, resources & waste management, or plastic pollution, with specific international policy knowledge being advantageous. If a candidate does not hold environmental policy experience, evidencing the desire to learn and professionally develop in this field will be essential. Dedicated to impact, you are comfortable in a coaching role to government leaders, helping them to understand the technical detail needed to confidently agree, announce, and implement strategies to tackle plastic pollution.

Common Seas

We are an international social enterprise designing and delivering upstream solutions to tackle the source of the plastics problem. Common Seas creates partnerships to design, deliver and demonstrate scalable solutions that tackle the source of the plastic problem. Our approach is tried and tested, with success stories from around the world.
